

GoMoto 4.3

- Batteries might be slightly different in size.
- We have just got information for the latest batch that batteries are one centimeter longer than the original ones. (different manufacturer).
- You need to switch one battery cable to a longer version and some self-drilling screws (parker screws) for relocating the components inside the battery compartment.
- Usually only one controller and converter has to be moved around 10cm closer to the charger.
- Here's a map of how we assemble the batteries here with the new batch.
